<p>* An Analytical Testing Restriction (“ATR”) has been imposed on the Bucharest Laboratory, limited to the application of the gas chromatography / combustion / isotope ratio mass spectrometry (GC/C/IRMS) method. This ATR is in effect as of 1 May 2021. The Bucharest Laboratory can continue carrying out its regular anti-doping activities, as per the ISL. However, all routine samples that require GC/C/IRMS analysis shall be securely transported to another WADA-accredited laboratory. The Laboratory had voluntarily informed WADA, as per the ISL, that it would be unable to update its GC/C/IRMS method in time to be compliant with the upcoming TD2021IRMS; therefore, this ATR was not related to a non-conformity resulting from its GC/C/IRMS method.</p>
