| * An Analytical Testing Restriction ("ATR") has been imposed on the Havana Laboratory, limited to the application of the gas chromatography / combustion / isotope ratio mass spectrometry (GC/C/IRMS) method. This ATR is in effect for six (6) months as of 16 November 2022. The Havana Laboratory can continue carrying out its regular anti-doping activities, as per the ISL. However, all required GC/C/IRMS analyses will be subcontracted to another WADA-accredited laboratory. |          |                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
