

CASES AND QUESTIONS

Case 1:

..... But the steroid module of the ABP has some additional information

ATHLETE BIOLOGICAL PASSPORT
SYMPOSIUM

Shaping the Present and Future of the ABP

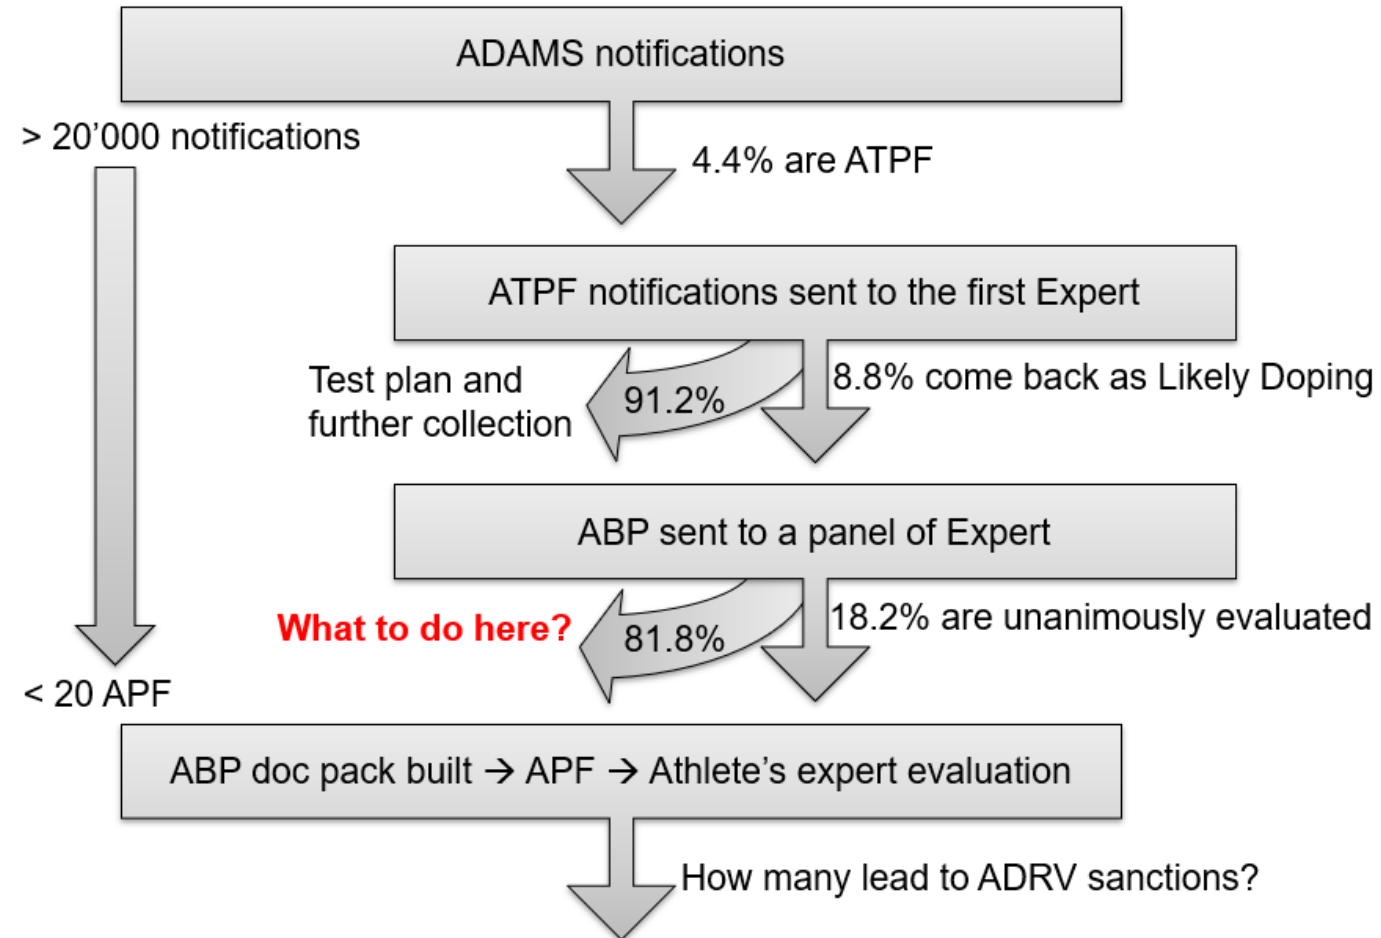

NOVEMBER 5-7, 2018 - ROME, ITALY

Case 1:

1. Should IRMS be built into the costs of all analysis?
2. Should we run more IRMS (i.e. on all longitudinal samples of a steroid passport?)

Case 2:

No agreement on evaluations by a panel: what to do then?

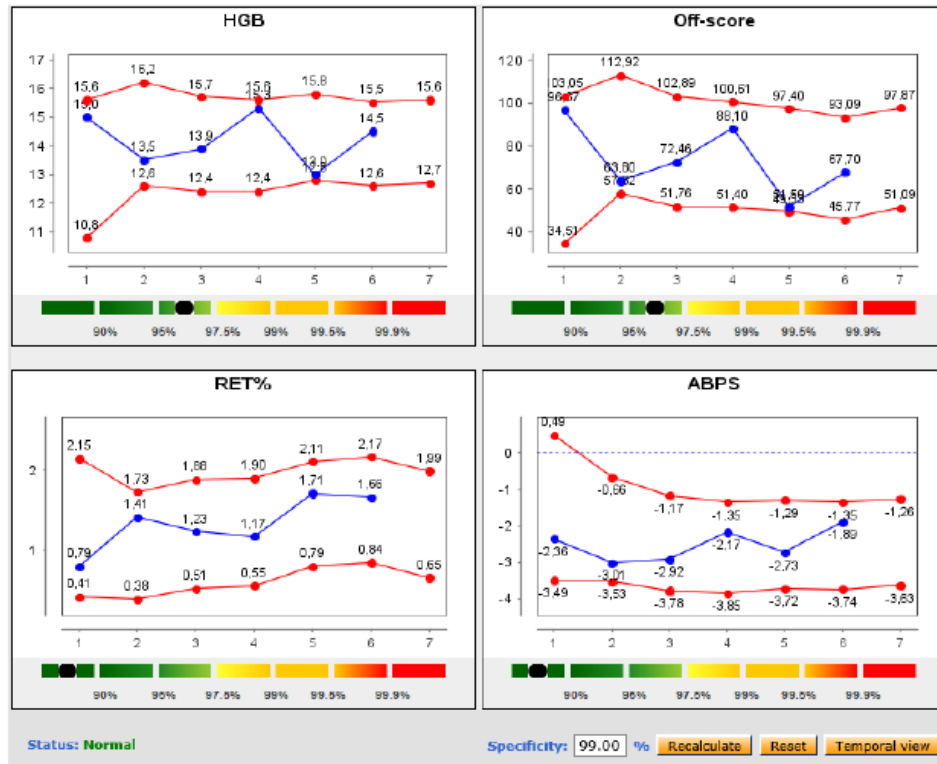

- How to proceed when non-unanimous expert panel evaluation?
- Do we need a standard procedure for how to proceed?

Case 3:

- 3 'Likely Doping'
- ABP Dock Pack Prepared
- New sample added to the profile

- How to proceed?
- Does the answer depend on the nature of the last result ('suspicious' or 'normal')?

Case 4:

Athlete resides at altitude

S1 = coll. 3 days before race
S4 = coll. 3 weeks before race

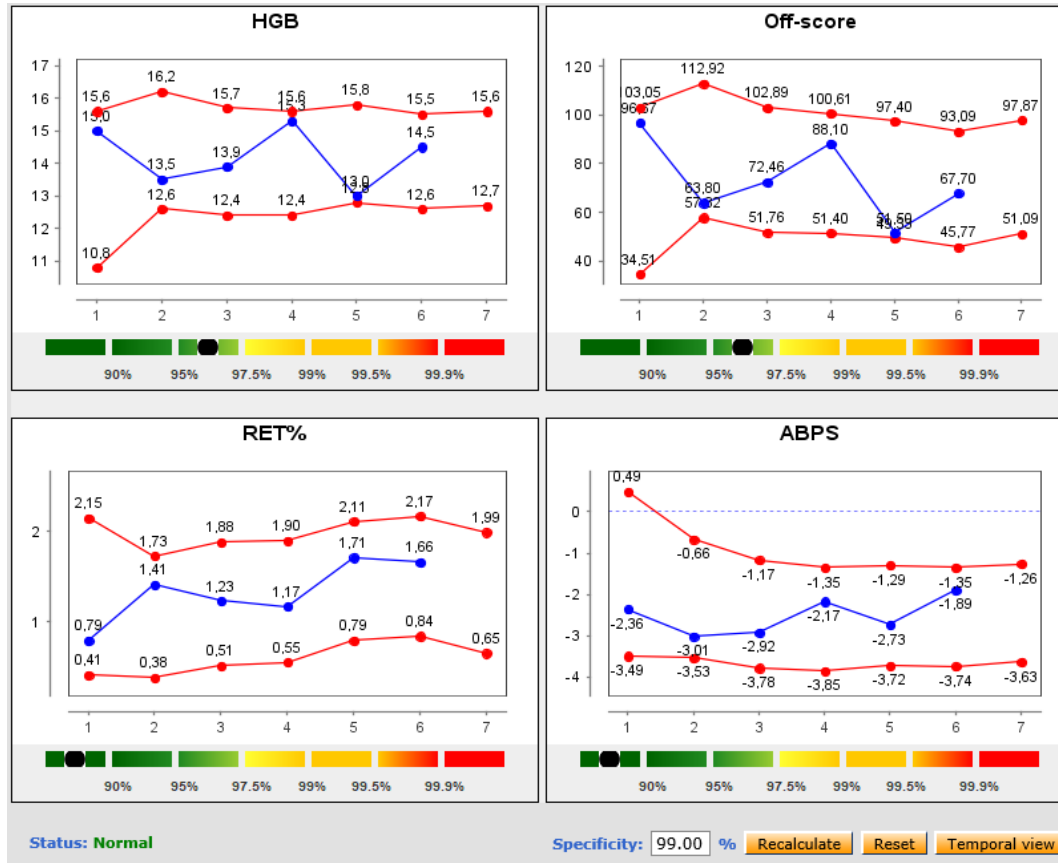

Expert opinion: S5 = suspicious
Expert recommendations:

Workshop question

Test frequently the month before the next major race and 7-10 days after the race

Likely doping by the 3 experts
