

## **Project Review**

### **“Quantitation of hGH Concentration in Serum Samples from Top Athletes with Caucasian and African Origin in order to proof existing Reference Ranges”**

**W. Schänzer**, (German Sport University, Cologne, Germany)

The aim of the study is to obtain data of two different pools of top athletes, one with athletes of Caucasian origin and one with athletes of African origin in order to proof and possibly recalculate the existing WADA criteria supporting an adverse analytical finding for hGH using CMZ LIA Kit 1 and 2 (CMZ, Berlin, Germany).
