

PROJECT REVIEW

“Final Validation for Implementation of GH Detection. First Step: Collection Scenarios”

M. Saugy (Laboratoire Suisse D'Analyses du Dopage, Switzerland)

The aim of the project is to evaluate the robustness of the method with athlete's samples regarding some collection scenarios and to compare the results obtained in different transport and storage conditions on serum samples.

The final aim of the global project is to obtain information on sampling practices also called collection scenarios based on supporting data.
