

## WADA Technical Document for Sport Specific Analysis – TD2014SSA

Document Number:	TD2014SSA	Version Number:	2.3
Written By:	TDSSA Expert Group	Approved By:	WADA Executive Committee
Date:	17 November 2015	Effective Date:	1 January 2016

### 1. Introduction

As part of WADA's move towards ensuring *Anti-Doping Organizations (ADOs)* implement more intelligent and effective anti-doping programs, Article 5.4.1 of the 2015 World Anti-Doping Code (WADC2015) states – "WADA, in consultation with International Federations and other *Anti-Doping Organizations*, will adopt a Technical Document under the *International Standard for Testing and Investigations (ISTI)* that establishes by means of a risk assessment which *Prohibited Substances* and/or *Prohibited Methods* are most likely to be abused in particular sports and sports disciplines."

This Technical Document for Sport Specific Analysis (TDSSA) is intended to ensure that the *Prohibited Substances* within the scope of the TDSSA that are deemed to be at risk of abuse in certain sports/disciplines are subject to an appropriate and consistent level of analysis by all *ADOs* that conduct *Testing* in those sports/disciplines. Compliance with the TDSSA is mandatory under the WADC2015.

The development of the TDSSA is based on a scientific approach linking physiological and non-physiological demand of *Athlete* performance with the potential ergogenic benefit of those *Prohibited Substances*. The TDSSA will complement other anti-doping tools and programs such as the *Athlete Biological Passport (ABP)*, intelligence gathering and investigations.

A Minimum Level of Analysis (MLA) is specified for the *Prohibited Substances* within the scope of the TDSSA for each sport/discipline, expressed as a percentage of the total number of eligible Tests and based on a Physiological Risk Assessment of that sport or discipline. The full MLA percentage list by sport/discipline is provided in Appendix 1 and 2 of this Technical Document.

The MLA percentage applies to *Testing* conducted by all *ADOs* on *International-Level Athletes* and *National-Level Athletes* as defined by the applicable *ADO*.

*ADOs* are encouraged to take advantage of Article 6.4.1 of the WADC2015, which provides for *ADOs* to request that Laboratories analyze their *Samples* using more extensive menus than those prescribed in this Technical Document.

The full *Prohibited List* remains applicable to all sports, including sports that are not covered by the TDSSA and/or for which the MLA is zero. Any *ADO* may, at its own discretion, request a WADA accredited laboratory to analyze any *Sample* for the *Prohibited Substances* within the scope of the TDSSA at any time.

WADA accredited laboratories under Article 6.4.3 of the WADC2015 may also, at their own initiative and expense, analyze *Samples for Prohibited Substances and/or Prohibited Methods* not included in the *Sample* analysis menu described in the TDSSA or specified by the Testing Authority (TA).

In addition to the mandatory provisions of this Technical Document which include Appendices 1 and 2, WADA has developed a series of supporting documents intended to assist with the implementation and application of the TDSSA. These resources are included herein as Supporting Documents A and B but are not to be considered appendices of the TDSSA itself as these will be amended from time to time to reflect the ongoing needs of stakeholders and evolving best practice.

Defined terms in the *Code*, *International Standards* and the TDSSA can be found in Article 10 of the TDSSA.

## 2. Objectives of the TDSSA

- 2.1. To protect clean *Athletes* by establishing MLAs for those *Prohibited Substances* within the scope of the TDSSA that are at risk of abuse in particular sports or disciplines.
- 2.2. To enhance the effectiveness of anti-doping programs.
- 2.3 To create accountability for stakeholders including International Federations (IFs), *National Anti-Doping Organizations (NADOs)*, *Major Event Organizations (MEOs)* and other TAs that conduct *Testing* on such sports and disciplines by implementing the required MLAs.
- 2.4 To maintain and build Laboratory capacity and proficiency for the detection of those *Prohibited Substances* within the scope of the TDSSA.

## 3. Scope

### 3.1. Level of *Athlete*

The requirements of the TDSSA are mandatory for *International-Level Athletes* and *National-Level Athletes* (as defined by IFs and *NADOs*, respectively). *ADOs* may also apply the TDSSA to other *Athletes* within their jurisdiction. For the purpose of meeting the MLAs, only analyses conducted on *International-Level Athletes* and *National-Level Athletes* will be used to assess an *ADO's* compliance with the TDSSA. All *Athletes* that compete in Major Events under the jurisdiction of a *MEO* will, for the purpose of the TDSSA, be presumed to be *International-Level Athletes* or *National-Level Athletes*.

### 3.2. *Prohibited Substances* on the TDSSA

From the *Prohibited List*, the *Prohibited Substances* that are within the current scope of the TDSSA are:

- Erythropoiesis Stimulating Agents (ESAs). Section S2.1.1
- Growth Hormone (GH). Section S2.5
- Growth Hormone Releasing Factors (GHRFs) including Growth Hormone Releasing Hormone (GHRH) and its analogues, Growth Hormone Secretagogues (GHS) and Growth Hormone Peptides (GHRPs). Section S2.5

The *Prohibited Substances* within the scope of the TDSSA are normally not part of a routine standard urine analysis and require specialized analysis methods.

Information and guidance on those *Prohibited Substances* is provided within the TDSSA *Testing Guides*.

The TDSSA does not mandate the use of the *ABP*. However, sports/disciplines for which the MLA for ESAs is 10% are encouraged to consider the benefits of implementing the *ABP* haematological module.

Those sports or disciplines for which the MLA for ESAs is 15% or greater are **strongly recommended** to implement the *ABP* haematological module in the relevant discipline(s) in order to enhance the quality of their anti-doping program.

Implementation of the *ABP* haematological module also enables *ADOs* to seek a reduction in the MLA percentage for ESAs, if they meet the criteria outlined in Article 6 of the TDSSA.

#### 4. MLA for Sports and Disciplines

Consistent with Article 5.4.1 of the WADC2015, *WADA* has consulted with IFs and other *ADOs* in the development of the TDSSA.

MLAs for sports/disciplines are located at:

- **Appendix 1** – Sports and Disciplines of Olympic, IOC Recognized and Non-Recognized International Federations<sup>1</sup> and Minimum Levels of Analysis (listed in alphabetical order)
- **Appendix 2** – Sports and Disciplines for *Athletes* with an Impairment and Minimum Levels of Analysis (listed in alphabetical order)

#### 5. Test Distribution Planning and MLA Percentages

##### 5.1. Test Distribution Plan (TDP)

In accordance with Article 4.2 of the *International Standard for Testing and Investigations (ISTI)*, each *ADO* must undertake in good faith a Risk Assessment as part of the development of an effective TDP under its jurisdiction.

The TDSSA is one important part of the overall TDP process. Once a TDP is developed, each *ADO* will be responsible for managing the implementation of the TDSSA throughout their *Testing* year by applying the required MLAs in a targeted manner to defined *Athletes*.

##### 5.2. Applying MLAs to the TDP

Once an *ADO* has conducted the required Risk Assessment and assigned Tests to a sport or discipline within its TDP, each *ADO* shall apply the prescribed MLA to the number of

---

<sup>1</sup> Includes only those non-IOC recognized sports that are members of the Alliance of Independent recognized Members of Sport (AIMS)

Tests allocated to each sport or discipline to determine the number of analyses required for each *Prohibited Substance* category as prescribed in the TDSSA.

One Test includes any number of *Samples* that may be collected from one *Athlete* during a single Sample Collection Session. For example, a Sample Collection Session in which one urine *Sample* and two blood *Samples* are collected will count as one Test.

As a further example in applying the MLA to a TDP, if an *ADO's* TDP for a sport/discipline consists of 100 Tests and its MLAs are 60% for ESAs, and 10% for GH/GHRFs, then the *ADO* should distribute these analyses as follows:

- 60% ESA analyses to be conducted in either urine or blood
- 10% GH/GHRFs analyses in blood for GH or in urine for GHRFs

*ADOs* can request multiple analyses on *Samples* collected during the same *Sample Collection Session*. In the example above, the absolute minimum number of Sample Collection Sessions could be 60. This is on the basis that the required number of GH/GHRF analyses are performed on those *Athletes* who are also being tested for ESAs.

The remaining 40 Tests from the 100 Tests would then be subject to either the standard routine urine analysis or a greater level of analysis, which *ADOs* are encouraged to do.

Whilst the MLAs are mandatory overall, selection of the *Athletes* to be tested, selection of the matrices collected (*i.e.* urine or blood) and the timing of those Tests remain at the discretion of the *ADO*.

Achieving the MLAs for the applicable sports or disciplines should be based on quality of *Testing*, and not simply reaching a required number of Tests. Thus, decisions should be based on intelligence where possible and may include *ABP* information, whereabouts, timing of competition periods, and any other information that may affect the pattern and the timing of *Use of the Prohibited Substances* within the scope of the TDSSA. The aim is to test the right *Athletes* for the right *Prohibited Substance(s)* at the right time.

As part of *WADA's* development and monitoring of *ADOs'* anti-doping programs, *WADA* will monitor each *ADO's* implementation of the TDSSA through *ADAMS*<sup>2</sup> and will review through a wider assessment of an *ADO's* compliance with the ISTI how Tests are being applied, on which *Athletes* and at what time.

Further guidance on the implementation of the TDSSA within a TDP can be found in the *WADA "Guidelines for Implementing an Effective Testing Program"* and in the Frequently Asked Questions (FAQs) located in Supporting Document B.

### 5.3. Sports/Disciplines without defined MLAs in the TDSSA

Those sports or disciplines that are determined to be at minimal physiological risk to the abuse of the *Prohibited Substances* within the scope of the TDSSA and do not have a MLA, shall be subject to *In-Competition and Out-of-Competition* routine standard urine analysis menus.

---

<sup>2</sup> *WADA* may require those *ADOs* that are not currently *ADAMS* users to provide additional reports to validate their compliance with the TDSSA from time to time.

However, a sport or discipline may be tested at any time by any *ADO* for those *Prohibited Substances* within the scope of the TDSSA and at a level greater than listed.

## 6. Seeking a reduction in the MLAs

Article 6.4.2 of the WADC2015 affords *ADOs* the opportunity to request that Laboratories analyze *Samples* with less extensive menus than those prescribed by the TDSSA. Such requests must satisfy *WADA* that "*because of the particular circumstances of their country or sport (...) less extensive analysis would be appropriate*". Article 4.7.2 of the *International Standard for Testing and Investigations (ISTI)* goes further in declaring that *WADA* may approve reductions only when it is satisfied that such reductions "*will lead to the most intelligent, effective and efficient use of available Testing resources*".

Compliance with the TDSSA alone is not sufficient to demonstrate intelligent, effective and efficient use of available resources. Consequently, the implementation of other 'intelligent *Testing*' strategies will be required before a reduction in MLAs can be considered and approved.

Specifically, *WADA* shall consider the following criteria when evaluating possible reductions:

### 6.1 Implementation of the haematological module of the *ABP* (applies to the MLA for ESAs only).

To be eligible for a reduction based on the adoption of the haematological module of the *ABP*, the *ADO* must be able to demonstrate that:

- 6.1.1. The *ABP* program of the sport/discipline has been operational for not less than six months;
- 6.1.2. The *ABP* program is compliant with the *WADA ABP Guidelines* and relevant Technical Documents, including:

The implementation of a real-time *Target Testing* process that acts upon the recommendations of an *Athlete Passport Management Unit (APMU)* or other expert group with reference to ESAs;
- 6.1.3. All relevant *ABP* data is available in *ADAMS* or another system approved by *WADA* to permit oversight by *WADA*;
- 6.1.4 The *ABP* pool includes the majority of relevant *Athletes* from whom an appropriate number of *ABP Samples* have been collected and analyzed annually as recommended by the *ABP Guidelines*, an *APMU* or other expert group.

The magnitude of any reduction will be discussed between *WADA* and the *ADO* taking into account all the circumstances including the level of ESA testing conducted before the implementation of the TDSSA.

*WADA* may approve a reduction of up to 50% of the MLA for ESAs based on its decision as to whether the required criteria have been met.

### 6.2. Particular Circumstances

An application for a reduction in MLA due to particular circumstances may only be made for the *Prohibited Substances* within the scope of the TDSSA. Such particular circumstances must be clearly outlined and supported with relevant documentation.

The burden is therefore on the *ADO* to prove through its application that a reduction in MLA for a sport or discipline will lead to the most intelligent, effective and efficient use of available *Testing* resources.

### 6.3. Application

The process, template application form and the level of information required to support an application is provided in Supporting Document A.

### 6.4. Approval Period

An approval for a reduction in MLA will be valid for the duration of the period approved by *WADA* as long as any specific conditions are continually adhered to by the *ADO*. *WADA* may review its approval for reduction of an *ADO's* MLA at any time.

#### 6.4.1 *ABP* Haematological Module

*WADA's* approval for a reduction of an *ADO's* MLA for ESAs based on the implementation of an effective *ABP* haematological module will remain valid as long as the *ADO* continues to meet any requirements set by *WADA* as part of the original approval. Such approval will roll over year to year subject to any review *WADA* may wish to conduct. In such situations *ADOs* do not need to reapply for approval unless circumstances associated with the original approval change.

## 7. Documentation

*ADOs* shall provide the following information to ensure that *WADA* can monitor and evaluate an *ADO's* implementation of the TDSSA accurately:

### 7.1. Sport and Discipline

To ensure accurate recording of *Sample* analysis by the Laboratories and reporting of statistics in *ADAMS*, Sample Collection Authorities and their Doping Control Officers must ensure that the correct sport **and discipline** for the *Athlete* is recorded at a minimum on the Laboratory copy of the *Doping Control Form* (DCF).

### 7.2. Type of Analysis for each *Sample*

The request for analysis of the *Prohibited Substances* within the scope of the TDSSA shall be provided to the Laboratory for each *Sample* to ensure the Laboratory conducts the correct analyses and accurately reports the results in *ADAMS*. *WADA* will use *ADAMS* to assist with the monitoring and evaluation of an *ADO's* compliance with the TDSSA.

The specific type of analysis required for each *Sample* shall be recorded on the chain of custody (or equivalent) documentation shipped with the *Samples* to the Laboratory or by an otherwise effective communication method that has been agreed with the Laboratory responsible for analyzing an *ADO's Samples*.

As per the ISTI the type of analysis requested shall not be recorded on the DCF.

### 7.3. Level of *Athlete* being Tested

The TDSSA is applicable to *International-Level Athletes* and *National-Level Athletes* as defined by each IF or *NADO*. To assist with the monitoring of an *ADOs' TDP* and compliance with the application of the MLAs to those defined *Athletes*, *ADOs* are required to develop a system to record the level of *Athlete*. This may be on the *Doping Control Form*, or by other means. *ADOs* may be requested to provide such data to *WADA* as part of *WADA's* wider compliance program. The level of *Athlete* can be recorded in *ADAMS*.

## 8. Data Analysis and Monitoring

For TDSSA monitoring and compliance purposes *WADA* will assess whether the *ADO* has met the MLAs based on *Doping Control* statistics. This will include, but not be limited to, the following elements:

- Total number of Tests and types of analyses;
- MLA achieved for each *Prohibited Substance* category within the scope of the TDSSA for each sport/discipline;
- Number of *Athletes* tested; and
- Laboratory capacity

These statistics and any other relevant information will also be used to review and modify the TDSSA over time.

It is expected that *ADOs* will also utilize this data to assist in the review of their TDP and the management of their *Doping Control* programs.

A more comprehensive evaluation of an *ADO's* compliance with the ISTI will include the review of the methods the *ADO* applied to the implementation of the MLAs in the TDSSA, including the selection and timing of Tests and the level of *Athlete* tested. This will be addressed through *WADA's* wider compliance program.

## 9. Review of TDSSA

As part of an ongoing review process, *WADA* will monitor the implementation of the TDSSA in consultation with *ADOs* and *WADA* accredited laboratories. Revisions to the TDSSA may be issued from time to time based on such consultation or for other reasons at *WADA's* discretion (*e.g.* revisions to the *Prohibited List* or inclusion of an existing *Prohibited Substance* that is currently not within the scope of the TDSSA). A suitable lead in time will be provided to *ADOs* in advance of such modifications taking effect.

## 10. Definitions

### 10.1 Defined terms from the WADC2015 that are used in the TDSSA

**ADAMS:** The Anti-Doping Administration and Management System is a Web based database management tool for data entry, storage, sharing, and reporting designed to assist stakeholders and *WADA* in their anti-doping operations in conjunction with data protection legislation.

**Anti-Doping Organization:** A *Signatory* that is responsible for adopting rules for initiating, implementing or enforcing any part of the *Doping Control* process. This includes, for example, the

International Olympic Committee, the International Paralympic Committee, other *Major Event Organizations* that conduct *Testing* at their *Events*, WADA, International Federations, and *National Anti-Doping Organizations*.

**Athlete:** Any *Person* who competes in sport at the international level (as defined by each International Federation) or the national level (as defined by each *National Anti-Doping Organization*). An *Anti-Doping Organization* has discretion to apply anti-doping rules to an *Athlete* who is neither an *International-Level Athlete* nor a *National-Level Athlete*, and thus to bring them within the definition of "Athlete." In relation to *Athletes* who are neither *International-Level* nor *National-Level Athletes*, an *Anti-Doping Organization* may elect to: conduct limited *Testing* or no *Testing* at all; analyze *Samples* for less than the full menu of *Prohibited Substances*; require limited or no whereabouts information; or not require advance *TUEs*. However, if an Article 2.1, 2.3 or 2.5 anti-doping rule violation is committed by any *Athlete* over whom an *Anti-Doping Organization* has authority who competes below the international or national level, then the *Consequences* set forth in the *Code* (except Article 14.3.2) must be applied. For purposes of Article 2.8 and Article 2.9 and for purposes of anti-doping information and education, any *Person* who participates in sport under the authority of any *Signatory*, government, or other sports organization accepting the *Code* is an *Athlete*.

*[Comment: This definition makes it clear that all International-Level Athletes and National-Level Athletes are subject to the anti-doping rules of the Code, with the precise definitions of international- and national-level sport to be set forth in the anti-doping rules of the International Federations and National Anti-Doping Organizations, respectively. The definition also allows each National Anti-Doping Organization, if it chooses to do so, to expand its anti-doping program beyond International-Level Athletes or National-Level Athletes to competitors at lower levels of Competition or to individuals who engage in fitness activities but do not compete at all. Thus, a National Anti-Doping Organization could, for example, elect to test recreational-level competitors but not require advance TUEs. But an anti-doping rule violation involving an Adverse Analytical Finding or Tampering, results in all of the Consequences provided for in the Code (with the exception of Article 14.3.2). The decision on whether Consequences apply to recreational-level Athletes who engage in fitness activities but never compete is left to the National Anti-Doping Organization. In the same manner, a Major Event Organization holding an Event only for masters-level competitors could elect to test the competitors but not analyze Samples for the full menu of Prohibited Substances. Competitors at all levels of Competition should receive the benefit of anti-doping information and education.]*

**Athlete Biological Passport:** The program and methods of gathering and collating data as described in the International Standard for Testing and Investigations and International Standard for Laboratories.

**Code:** The World Anti-Doping Code.

**Doping Control:** All steps and processes from *Test Distribution Planning* through to ultimate disposition of any appeal including all steps and processes in between such as provision of whereabouts information, *Sample collection and handling*, laboratory analysis, *TUEs*, results management and hearings.

**Event:** A series of individual *Competitions* conducted together under one ruling body (e.g., the Olympic Games, FINA World Championships, or Pan American Games).

**Event Period:** The time between the beginning and end of an *Event*, as established by the ruling body of the *Event*.

**In-Competition:** Unless provided otherwise in the rules of an International Federation or the ruling body of the *Event* in question, “*In-Competition*” means the period commencing twelve hours before a *Competition* in which the *Athlete* is scheduled to participate through the end of such *Competition* and the *Sample* collection process related to such *Competition*.

**International-Level Athlete:** *Athletes* who compete in sport at the international level, as defined by each International Federation, consistent with the International Standard for Testing and Investigations.

*[Comment: Consistent with the International Standard for Testing and Investigations, the International Federation is free to determine the criteria it will use to classify Athletes as International-Level Athletes, e.g., by ranking, by participation in particular International Events, by type of license, etc.*

*However, it must publish those criteria in clear and concise form, so that Athletes are able to ascertain quickly and easily when they will become classified as International-Level Athletes. For example, if the criteria include participation in certain International Events, then the International Federation must publish a list of those International Events.]*

**International Standard:** A standard adopted by WADA in support of the *Code*. Compliance with an *International Standard* (as opposed to another alternative standard, practice or procedure) shall be sufficient to conclude that the procedures addressed by the *International Standard* were performed properly. *International Standards* shall include any *Technical Documents* issued pursuant to the *International Standard*.

**Major Event Organizations:** The continental associations of *National Olympic Committees* and other international multisport organizations that function as the ruling body for any continental, regional or other *International Event*.

**National Anti-Doping Organization:** The entity(ies) designated by each country as possessing the primary authority and responsibility to adopt and implement anti-doping rules, direct the collection of *Samples*, the management of test results, and the conduct of hearings at the national level. If this designation has not been made by the competent public authority(ies), the entity shall be the country’s *National Olympic Committee* or its designee.

**National-Level Athlete:** *Athletes* who compete in sport at the national level, as defined by each *National Anti-Doping Organization*, consistent with the International Standard for Testing and Investigations.

**Out-of-Competition:** Any period which is not *In-Competition*.

**Prohibited List:** The *List* identifying the *Prohibited Substances* and *Prohibited Methods*.

**Prohibited Substance:** Any substance, or class of substances, so described on the *Prohibited List*.

**Regional Anti-Doping Organization:** A regional entity designated by member countries to coordinate and manage delegated areas of their national anti-doping programs, which may include the adoption and implementation of anti-doping rules, the planning and collection of

*Samples*, the management of results, the review of *TUEs*, the conduct of hearings, and the conduct of educational programs at a regional level.

**Sample or Specimen:** Any biological material collected for the purposes of *Doping Control*.

**Target Testing:** Selection of specific *Athletes* for *Testing* based on criteria set forth in the International Standard for Testing and Investigations.

**Testing:** The parts of the *Doping Control* process involving test distribution planning, *Sample* collection, *Sample* handling, and *Sample* transport to the laboratory.

**Use:** The utilization, application, ingestion, injection or consumption by any means whatsoever of any *Prohibited Substance* or *Prohibited Method*.

**WADA:** The World Anti-Doping Agency.

## 10.2 Defined Terms from the International Standards that are used in the TDSSA

**Athlete Passport Management Unit (APMU):** A unit composed of a *Person* or *Persons*, designated by the *Anti-Doping Organization*, responsible for the administrative management of the Passports advising the *Anti-Doping Organization* for intelligent, *Targeted Testing* liaising with the Expert Panel compiling and authorizing an *Athlete Biological Passport* Documentation Package and reporting Adverse Passport Findings.

**Doping Control Officer (or DCO):** An official who has been trained and authorized by the *Sample* Collection Authority to carry out the responsibilities given to DCOs in the International Standard for Testing and Investigations.

**Doping Control Station:** The location where the *Sample* Collection Session will be conducted.

**Laboratory(ies):** (A) *WADA*-accredited laboratory(ies) applying test methods and processes to provide evidentiary data for the detection of *Prohibited Substances*, *Methods* and *Markers* on the *Prohibited List*, and if applicable, quantification of a Threshold Substance in *Samples* of urine and other biological matrices in the context of anti-doping activities.

**Major Event:** A series of individual international *Competitions* conducted together under an international multi-sport organization functioning as a ruling body (e.g., the Olympic Games, Pan American Games) and for which a significant increase of resources and capacity, as determined by *WADA*, is required to conduct *Doping Control* for the *Event*.

**Sample Collection Authority:** The organization that is responsible for the collection of *Samples* in compliance with the requirements of the International Standard for Testing and Investigations, whether (1) the *Testing* Authority itself; or (2) another organization (for example, a third party contractor) to whom the *Testing* Authority has delegated or subcontracted such responsibility (provided that the *Testing* Authority always remains ultimately responsible under the *Code* for compliance with the requirements of the International Standard for Testing and Investigations relating to collection of *Samples*).

**Sample Collection Session:** All of the sequential activities that directly involve the *Athlete* from the point that initial contact is made until the *Athlete* leaves the *Doping Control* Station after having provided his/her *Sample(s)*.

**Test Distribution Plan:** A document written by an *Anti-Doping Organization* that plans *Testing* on *Athletes* over whom it has *Testing Authority*, in accordance with the requirements of Article 4 of the International Standard for Testing and Investigations.

**Testing Authority:** The organization that has authorized a particular *Sample* collection, whether (1) an *Anti-Doping Organization* (for example, the International Olympic Committee or other *Major Event Organization*, *WADA*, an International Federation, or a *National Anti-Doping Organization*); or (2) another organization conducting *Testing* pursuant to the authority of and in accordance with the rules of the *Anti-Doping Organization* (for example, a National Federation that is a member of an International Federation).

### **10.3 Defined terms specific to the TDSSA**

**Minimum Level of Analysis (MLA):** The number of analyses for the Prohibited Substances within the scope of the TDSSA required to be performed by an *ADO* for each sport/discipline, expressed as a percentage of the total eligible Tests in their TDP.

**Physiological Risk Assessment:** Analysis of the physiological demands of a sport or discipline against the potential performance enhancing benefit of *Prohibited Substances* on the TDSSA.

**Risk Assessment:** An all-inclusive assessment of risk (as described in the *International Standard* for *Testing* and Investigations) of a sport or discipline in relation to doping that considers a wide range of risk factors in addition to physiological risk. Such factors may include doping history, financial gain, gender, age, status of the sport within a country etc.

**Test:** Any combination of *Sample(s)* collected (and analyzed) from a single *Athlete* in a single *Sample Collection Session*.
